Documentación del Proyecto ATI[UCV]LOG

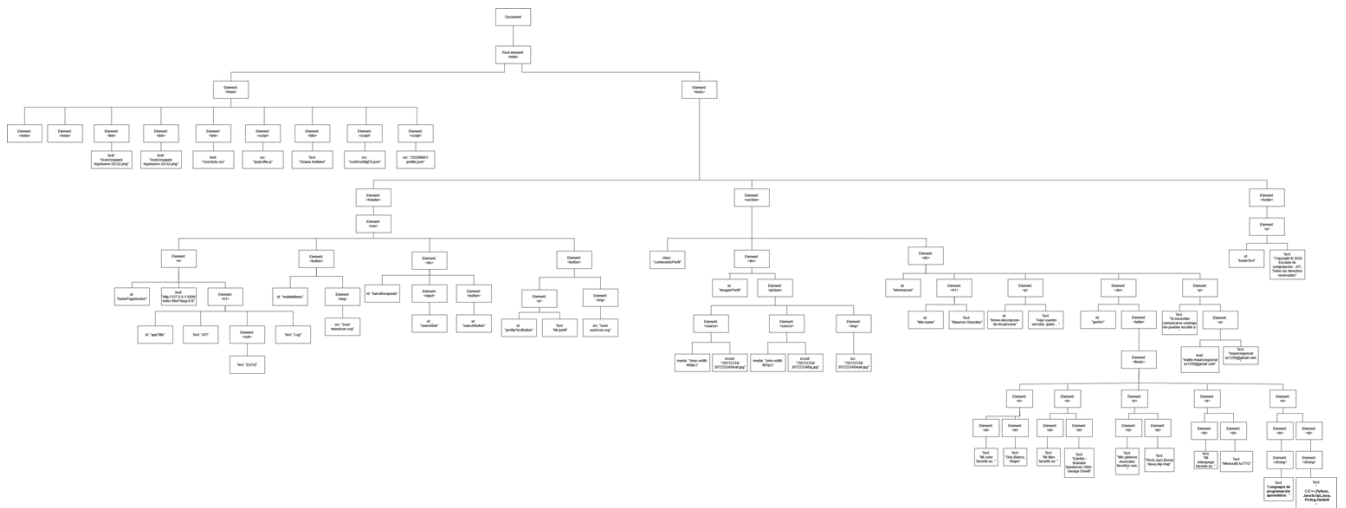

28/05/2026

Por:
Mauricio González, CI: 30722334

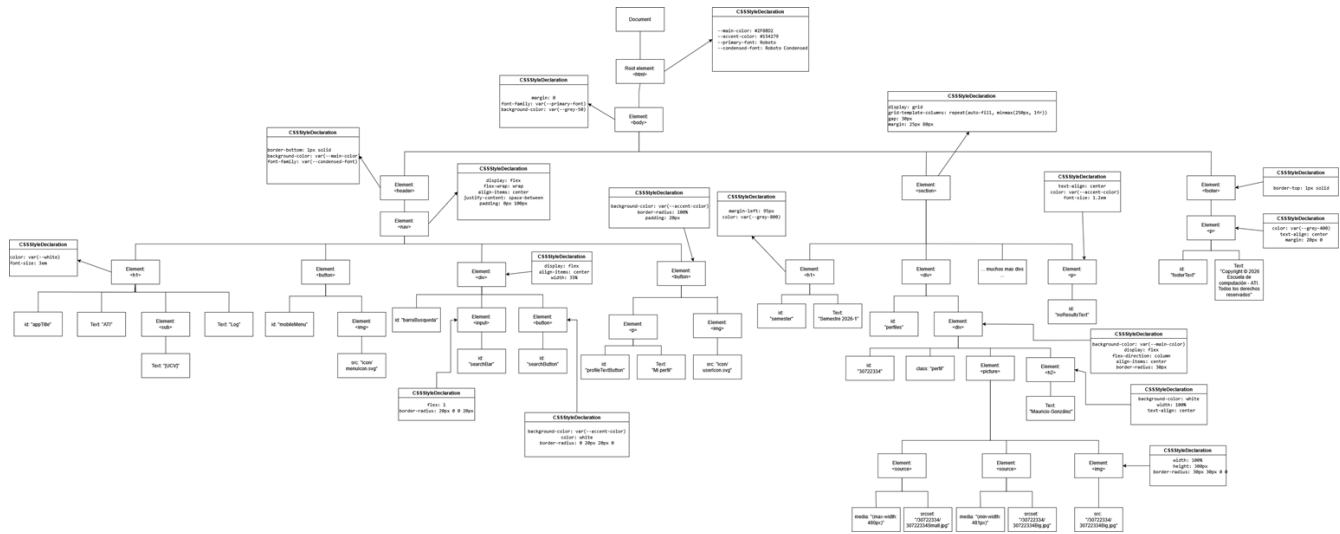

Árbol DOM de la página de índices (index.html):

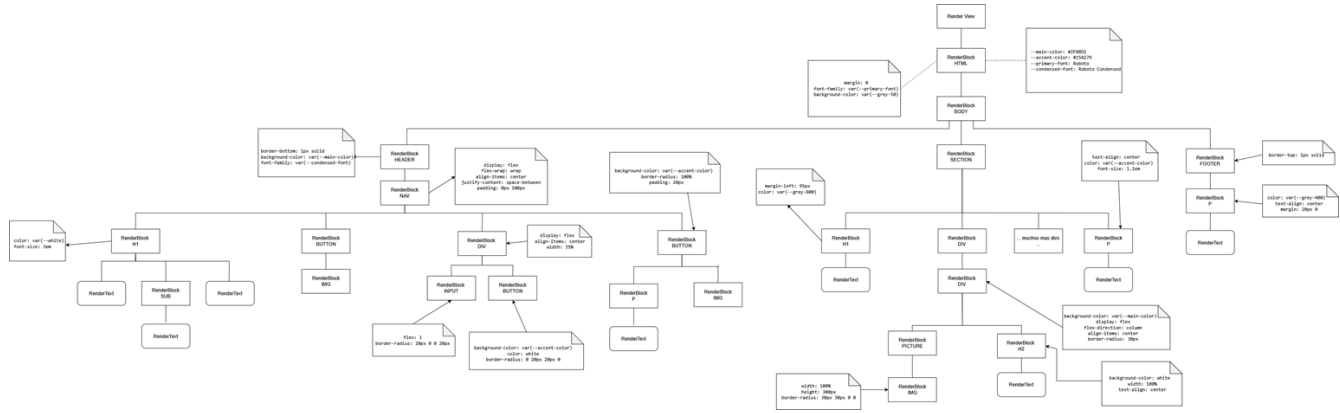

Árbol DOM de la página de perfil (profile.html):

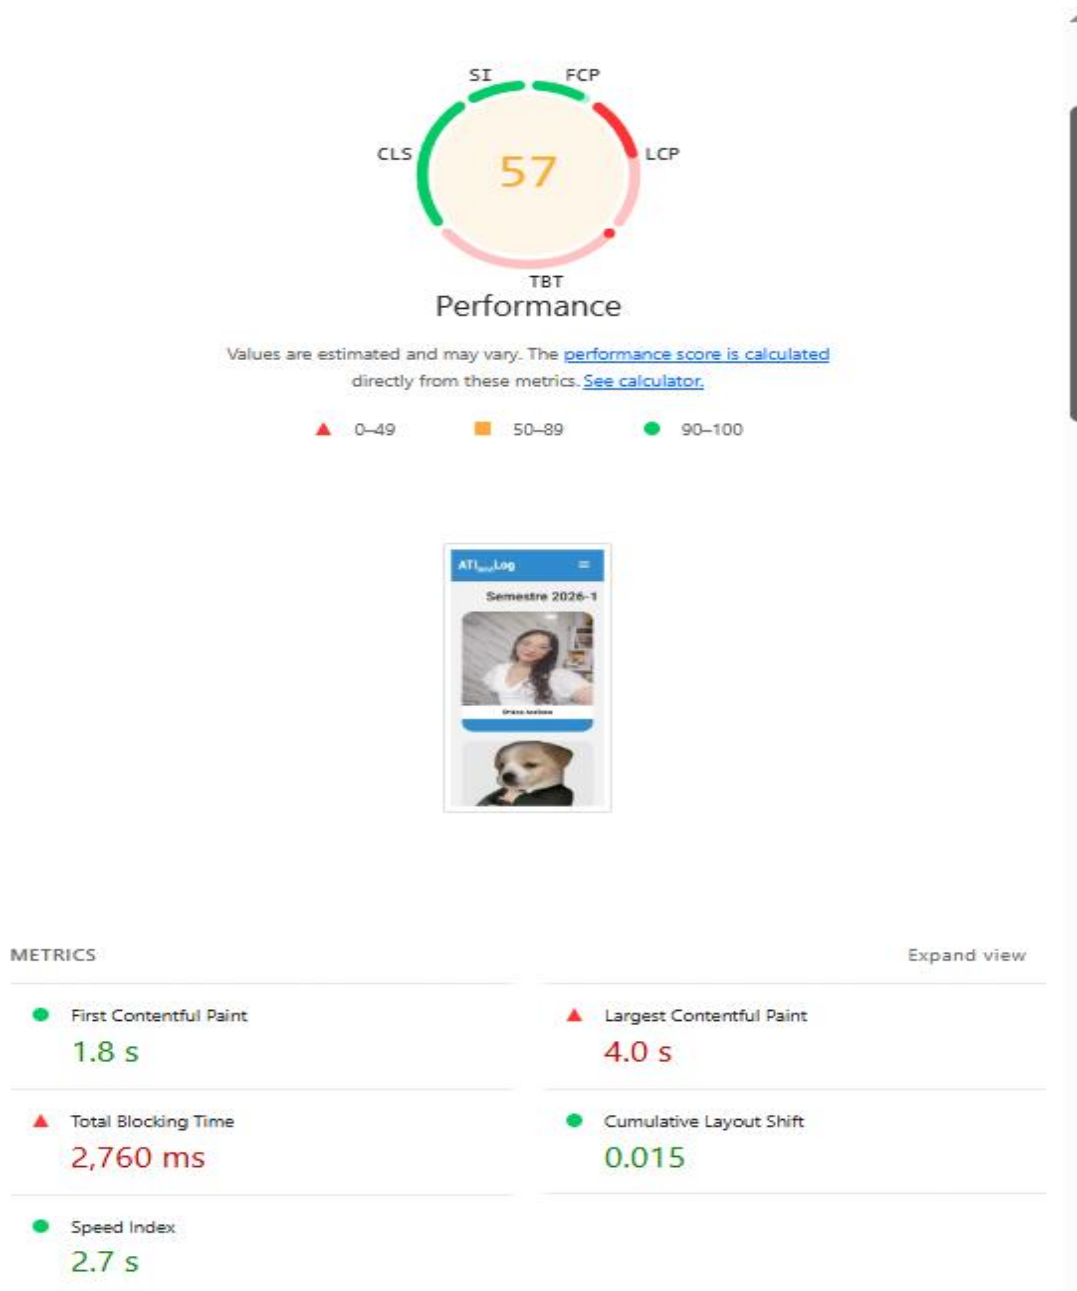

Árbol CSSOM generado por la página de índices (index.html):

Árbol Render generado por la página de índices (index.html):

He utilizado la herramienta Lighthouse para ver el rendimiento general y performance de la página de listado index.html. Lighthouse provee un análisis del rendimiento, accesibilidad, buenas prácticas y SEO que existen en mi página, y en base a su evaluación, la categoría Best Practices obtuvo 96/100, lo que indica un código limpio y seguro. Sin embargo, el rendimiento se vio afectado por un Total Blocking Time de 2760 ms, y una ejecución larga y alta de JavaScript (3.9 s), lo cuál tiene como consecuencia que mi página se sienta lenta al interactuar con ella, además de 7 tareas largas en el hilo principal. La herramienta identificó oportunidades de mejora como reducir CSS y JS no utilizados (388 KiB y 3,222 KiB respectivamente), eliminar recursos bloqueantes, añadir atributos “alt” a todas las imágenes, especificar dimensiones explícitas para evitar cambios de layout, mejorar el contraste de colores, añadir una meta description y una etiqueta main. Estas mejoras incrementarían la accesibilidad y el SEO, y reducirían el tiempo de carga percibido.

INSIGHTS

 Render-blocking requests — Est savings of 1,130 ms	▼
 LCP request discovery	▼
 Network dependency tree	▼
 Document request latency — Est savings of 2 KiB	▼
 Improve image delivery — Est savings of 1,693 KiB	▼
 Layout shift culprits	▼
 LCP breakdown	▼
 3rd parties	▼

These insights are also available in the Chrome DevTools Performance Panel - [record a trace](#) to view more detailed information.

DIAGNOSTICS

 Minimize main-thread work — 5.0 s	▼
 Reduce JavaScript execution time — 3.9 s	▼
 Page prevented back/forward cache restoration — 1 failure reason	▼
 Image elements do not have explicit <code>width</code> and <code>height</code>	▼
 Minify CSS — Est savings of 3 KiB	▼
 Reduce unused CSS — Est savings of 385 KiB	▼
 Reduce unused JavaScript — Est savings of 3,222 KiB	▼
 Avoid long main-thread tasks — 7 long tasks found	▼

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

NAMES AND LABELS

▲ Buttons do not have an accessible name

▲ Image elements do not have `[alt]` attributes

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

BEST PRACTICES

▲ Document does not have a main landmark.

These items highlight common accessibility best practices.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

[Show](#)

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

Best Practices

USER EXPERIENCE

▲ Displays images with incorrect aspect ratio

TRUST AND SAFETY

○ Ensure CSP is effective against XSS attacks

○ Use a strong HSTS policy

○ Ensure proper origin isolation with COOP

○ Mitigate clickjacking with XFO or CSP

○ Mitigate DOM-based XSS with Trusted Types

SEO

These checks ensure that your page is following basic search engine optimization advice. There are many additional factors Lighthouse does not score here that may affect your search ranking, including performance on [Core Web Vitals](#). [Learn more about Google Search Essentials](#).

CONTENT BEST PRACTICES

▲ Document does not have a meta description

▲ Image elements do not have `[alt]` attributes

Format your HTML in a way that enables crawlers to better understand your app's content.
